Experience

Programmer Intern

Strayflux Studio — Feb 2025 - Feb 2026

- Designing and building a software product from ground up with company's established development pipeline in a cross functional team of 5.
- Designed and developed a core system architecture and features with **Unity** and **C#** programming language, to ensure scalability and maintainability.
- Implemented backend logic and system through clean code to ease the integration with other programmer's works, and vice-versa.
- Building and enhancing developer workflow to ensure and maintain great developing experience by the team.

Associate Programmer

Bina Nusantara IT Division — Mar 2023 - Feb 2024

- Maintained and enhanced 3+ internal web portals written in **C# and ASP.NET**, accessed and used by students and staff across the organization to ensure smooth and consistent user experience and intended functionality.
- Collaborated in a 4-person sub team within a larger engineering group to introduce new features according to growing user's demand and resolve bugs that improved usability.
- Actively fixed recurring issues and bugs that was reported by users to reduce error reports and improve platform stability.
- Implemented feature upgrades that aligned with user feedback that will supports evolving academic and administrative workflows.

Projects

Portfolio Website (paundra0217.github.io)

Aug 2025 - Now

Built a personal portfolio website using **Next.js**, **Tailwind**, and **Motion** (prev. Framer Motion) to showcase projects and professional experience, featuring responsive design and simple animations, and deployed the site for cross-device accessibility.

Meeting Scheduler

Nov 2023 - Now

A simple meeting scheduler application that currently being re-developed from an older application, using **React**, **Laravel** and **MySQL** as a personal project, with more refined database schema, updated to the latest stable version of the framework and database, and revamping core features through cleaner code and project structuring.

Echoes Beneath

Jul 2024 - Sep 2024

Built user interfaces and backend logic by implementing menu and settings interfaces, UI logic, and core functionality for an interactive user experience in a team of programmers, to collaboratively develop a 3D game or interactive application with **Unity** and **C#** programming language

Education

Bachelor of Science in Computer Science (Game Application and Technology)

2026

BINUS University

Skills

- **Languages:** Indonesian (native), English (TOEIC 920)
- **Programming Languages:** C#, PHP, HTML/CSS, JavaScript, SQL
- **Technologies:** React, Laravel. Tailwind CSS, Unity
- **Tools:** Visual Studio, VS Code, Git, Figma
